

PhoSul®

GROWS WITH NATURE®

0-8-0-4

Eco-Friendly Agricultural Phosphate Fertilizer

Ideal for Organic Growing Practices

PhoSul® is a uni-granule currently made with clean low heavy metals, Falcon Isle Phosphate rock, a non-crystalline silica and elemental sulfur. At a high level PhoSul® is a certified Organic (both OMRI and Pro-Cert) Phosphate fertilizer, that resists, or does not leach in water, but is citrate soluble or “plant available” as required by the plant. PhoSul® has a much lower salt index (7) compared to MAP (30-40). Which makes in furrow use possible with row crops significantly reducing seed mortality rates.

Environmentally Friendly

The big difference is that our product is made with a dry process and literally with almost “no” waste or by-products as a function of the manufacturing process. Unlike straight phosphate rock this product works in most all phosphate deficient soil types, both acidic and non-acidic.

Tested & Proved

PhoSul has been tested with four of Montana State Universities research stations on a variety of field crop tests (wheat and alfalfa) over the last four years. A greenhouse study with radishes has been completed, as well as new commercial field trials with Blueberries, Cherries, Raspberries, Strawberries, and Canola.

Analysis

Total Phosphate (P ₂ O ₅).....	20.0%
Available Phosphate (P ₂ O ₅).....	8.0%
Calcium (Ca).....	20.0%
Sulfur (S).....	4.0%

Available Blends

Available in 2 granule sizes.
240 SGN (fairway grade/mediums)
120 SGN (greens grade/smalls)
120/240 blended
